

# Reading: Lab Options by Programming Language

**Estimated time needed:** 10 mins

To enrich your learning experience, this course offers hands-on labs in two programming languages: **Python** and **JavaScript**.

You can choose labs based on your preferred technology or the **Professional Certificate (PC)** track you are pursuing:

- **Option A – Python Labs:** Offered as the default lab version for this course.
- **Option B – JavaScript Labs:** Suggested if you’re pursuing a **JavaScript PC**.

Labs are available in both the language versions. Please select the version that best aligns with your learning path or interests.

This flexible approach allows you to work in the language you’re most comfortable with while engaging with the core concepts of the course.

**Note:** The labs in Option B have the similar duration as those in Option A – Python Labs; however, they are designated as 1 minute here to ensure the overall course duration remains unaffected.

Explore your options, choose what suits you best, and enjoy the learning journey.

**Happy learning!**
